

# University Hospitals of Morecambe Bay (UHMB) Wound Care Formulary 2024

Version: 1.0

The Wound Care Formulary was compiled by the Tissue Viability Nurses within the 5 Trusts in the Integrated Care Board (ICB). The aim of this Wound care Formulary is:

- To provide practitioners with guidance and a selection of products which are for preferred use in the UHMB footprint, based on effectiveness, suitability, acceptability, and cost-effectiveness.
- Practitioners should aim to use a product included in the formulary in all cases and only use a non-formulary product when there is a good clinical reason for doing so.
- As a health professional using a formulary you must:
  - Use your professional skills, knowledge, and judgement to make a decision and justify the decisions you make.
  - Ensure the advice you give is evidence based.
  - Have the knowledge and skills for safe and effective practice.
  - Recognise and work within the limits of your competence.
  - Keep knowledge and skills up to date.
  - Take part in learning/practice activities.
  - Keep a clear record and accurate record of all the discussions you have, assessments you make, the treatment you provide and the effectiveness of the treatment.
- Ensure everyone is aware of the dressing regime.

Yellow (Sloughy)		Superficial	Remove slough	Honey + Foam or Absorbent Pad	Alginate / gelling fibre + Foam or Absorbent Pad
Yellow (Sloughy)		Deep / Cavity	Remove slough	Alginate / honey as filler + Foam or Absorbent Pad	Alginate / gelling fibre as filler + Foam or Absorbent Pad
Black (Necrotic/Eschar)		Caution – Not suitable to debride. Never debride black stable eschar from lower limb without seeking specialist advice. In heel / foot pressure ulcers, this may serve as the body's natural protection and should not be removed. Consider use of Inadine strips around the wound edge to protect healthy skin from non-viable tissue.			
		If appropriate wound for debridement, consider speed of debridement (to reduce risk of infection). Conservative sharp (by trained Podiatrist / TVN; Autolytic (hydrogel / hydrocolloid) or Larvae (via TVN).			
Clinically Infected		Superficial or deep	Reduce bacteria in wound	Wound swab + Oral antibiotics + antimicrobial dressing. Review sensitivities and prescribe/change antibiotic accordingly. Change to alternative antimicrobial if no improvement. Ensure observations for sepsis are in place.
